

Jousseau

Risk management as an improvement strategy

The Jousseau company implemented a safety management system in its Viré and Pont de Vaux workshops based on the assistance provided by Cetim.

OUR CUSTOMER

Corporate name
Jousseau

Activity
Subcontractor in mechanical parts production (machining in small, average and large batches, welding, painting, manufacture of belt conveyors)

Sales turnover
20 million euro

Workforce
200 people

Context
The Jousseau group is composed of six companies located in the Rhone-Alpes and Burgundy. Since 1996, its direction embarked the group in a management process which lead it up to ISO 9001 issue 2000 and OHSAS 18001 certification, ten years after

In its workshops located at the north of Macon, Jousseau produces mechanical precision parts as a subcontractor (machining, welding, painting). In order to improve and to secure the future of its safety management, Mr Dominique Jousseau embarked his company in a process of OHSAS 18001 certification. Goals: setting up an organization and follow-up audits allowing to face the daily constraints of the production.

A customized assistance

The first step consisted in defining the current state

of risks on two units and of their management. The next one consisted in drawing up, with the company's manager Dominique Jousseau, Isabelle Juillard (human resources manager) and Gilles Drink (in charge of quality), an action plan for the next 12 months. As a consultant, Cetim supported and validated the implementation of this one-

year plan. Training sessions organized in parallel allowed to increase awareness in the whole company and to give the organizers the useful elements to accomplish their mission.

An exemplary success

The dynamism of the company's managerial staff and personnel around the project allowed to get from the first time the OHSAS certification. "Our safety approach had begun several years ago. Working with Cetim was an opportunity to grab, in order to obtain OHSAS 18001 certification. We needed a frame, a structure to go ahead more efficiently and to make a reality of what had been done.

The SSE diagnosis carried out by Cetim at the beginning of the action allowed to define a real current state assessment. Cetim then supported us on our weak points and allowed us to go forth step by step until we reached OHSAS certification."

Cetim's asset

Its precise knowledge of the trades of the mechanics, of their risks and of relevant regulations, allows Cetim help introducing customized solutions fitting to the company.
