

# CORABIO 2016

## First International Workshop on Corrosion in Advanced Biorefineries

The first international workshop focusing on corrosion issues in biorefineries will be held in Compiègne, France within the premises of her University of Technology. Further to first reporting about the project at the 2014 edition of the European congress Eurocorr in Pisa, the focus of this workshop is to report of the major achievements of the Ecorbio Project (2012-2015) funded by Regional Council of Picardy and Feder. The workshop will also welcome contributions originating from other research works featuring common cross-border aspects of corrosion and world-wide emerging advanced biorefining aiming at sustainable transformation of biomass into a portfolio of products and energy vectors.

The abstract will be send before 10<sup>th</sup> February, 2016 to wingrid Agapit:
