

# Milton Roy Europe Comprehensive training in materials

To remain at the cutting edge of innovation, Milton Roy Europe decided to carry out a survey of the technologies and standards relating to materials and their treatments. The survey led to a specific training programme for its teams.

## OUR CUSTOMER

**Corporate**  
Milton Roy Europe

**Activity**  
Milton Roy Europe is the European division of Milton Roy, a world leader of fluid dosing, mixing and control technologies. Today, the group, established in 1936, employs 1,200 people throughout the world (244 in Milton Roy Europe) and achieves a turnover of over 300 million dollars. Today the group is a part of Accudyne Industries.

**Turnover**  
60 million euros

**Workforce**  
244 people

**M**ilton Roy Europe is an expert in fluid dosing, mixing and control. It manufactures pumps, agitators and dedicated systems for chemical, oil, mining, agri-food or water treatment companies. Its aim is to provide equipment for continuous dosing and injection of clear, viscous, abrasive, corrosive or volatile fluids, at any flow rate or pressure, and all this in environments that can even be corrosive. Therefore, it is easy to understand that the main concern of the company's managers is to remain up to date with the latest knowledge regarding standards, materials and their treatments. "There are many innovations in the field

of materials, and the standards applicable to the various sectors in which we operate are changing extremely rapidly", says Gaëtan Spude, the company's R&D Manager. "We wanted a comprehensive training in materials, but in the specific fields that our study coordinators are interested in. We also wanted up-to-date tables showing all equivalent standards applicable in the various markets in which we operate, among which Europe, America, China, etc."

## A wide and specific programme

In order to meet this requirement, Cetim put its teams to work and several experts in materials, surface treatments,

tribology, corrosion and standards were dispatched, in turns, to Milton Roy Europe's headquarters in Pont-Saint-Pierre (Eure, France). "Together with Cetim's materials experts, we built a wide and specific programme which was perfectly suited to our needs", continues Gaëtan Spude. "We are extremely satisfied with this collaboration since, in addition to the training, Cetim's experts gave us extensive documentation with summary data sheets allowing us to compare the various standards, treatments, hardness levels, etc. Furthermore, we have established a close relationship with these experts, who are always willing to help when we have a specific need".

## Cetim's asset

With its internationally-recognised experts in every fields

of mechanical engineering, Cetim can implement high-level training programmes to meet the specific needs of companies.
