Corporate name
Stelliant Expertise

Workforce
More than 250 experts dedicated to professionals, across 140 locations throughout France

Turnover
More than 240,000 cases handled each year

Business activity
This entity of the Stelliant group, present throughout France, deals with complex claims involving significant technical and economic issues, particularly in the field of renewable energies: wind, biogas, photovoltaic, hydrogen, hydroelectricity, geothermal energy, etc.

Leaks in stainless steel pipes at a cogeneration plant, cracks in an engine block at a methanisation unit, explosion of steam pipes at an industrial site: these incidents cause operational downtime and require an immediate response. Direct damage and operating losses can amount to several million euros.

In these contexts, where economic, technical and legal issues are at stake, insurance experts must react quickly and mobilise reliable skills to ensure their analysis is reliable. Patrick Lubczynski, Structure Expert and Head of Renewable Energy at

Stelliant Expertise, chose Cetim. *"The first requirement is responsiveness. Cetim can very quickly determine whether a study is possible, at what cost and within what timeframe."* This ability to position itself quickly, even on unclear grounds, is a strategic asset for launching a contradictory expert assessment without delay. The first usable results, often available before the end of the full analysis, already provide guidance for the case.

Cross-functional skills for enhanced expertise

For Stelliant, Cetim's value also lies in its combination of solid technical expertise and a capacity to deliver results tailored to the insurance context. *"The experts know how to avoid technical jargon and deliver conclusions that are understandable and usable,"* emphasises Patrick Lubczynski, who

also appreciates their ability to adjust the level of analysis to suit the needs of each case, from simple testing to advanced digital modelling. All this is combined with a multidisciplinary approach that is invaluable in complex cases: Cetim has a dedicated team bringing together the necessary skills – materials, heat treatment, mechanics, etc. – under the coordination of a lead expert. If necessary, engineers can visit the site to gain an overall picture and evaluate the situation directly. *"More than just a supplier, Cetim is a partner,"* concludes Patrick Lubczynski. A partner with whom to develop more solid and less contestable expertise when dealing with opposing parties.

Cetim's asset

Combining responsiveness, multidisciplinary expertise and a high level of specialisation, Cetim delivers detailed, directly actionable analyses that strengthen the credibility of insurance experts in litigation cases.
