ISO dimensioning – Geometrical Product Specification (GPS) Handbook – 2018 edition

“Geometrical product specification is a means of communication used by designers, engineers, quality specialists, inspectors and metrologists to exchange unambiguous information on the permissible geometries of mechanical parts via the use of specifications... provided on drawings... The syntax and semantics of the associated graphic and symbolic “language” are defined in GPS standards.”

This handbook is in line with this GPS approach. It was designed as a practical tool summarising the GPS standards relating to tolerancing and is aimed at delivering the latest changes made to the main elements contained in the basic dimensioning and tolerancing standards since the first edition of the Handbook.

The English version can be downloaded free of charge by subscribers. If you do not have an account, you can create one via the cetim.fr website.

Order form for the ISO dimensioning - Geometrical Product Specifications (GPS) Handbook - 2018 Edition (ref.: 4C17)

Please send with your payment – The Handbooks will be sent out in late October 2018

I would like to receive:

- 1 free copy (offer open to Cetim subscribers)
- additional copy(copies) at € 2.50 incl. tax per copy, including postage (offer open to Cetim subscribers)
- copy (copies) at € 6 incl. tax per copy, including postage (for non-subscribers)

Please contact us at +33(0)3 44 67 36 82 for orders of more than 50 copies.
