

Pressure equipment reliability

Non-destructive testing

Computation and control for your pressure equipment reliability

YOUR EXPECTATIONS

As a pressure equipment designer or user, you want to:

- improve your equipment safety
- ensure your equipment life expectancy
- reduce operation stops
- make regulatory or voluntary controls to optimize maintenance

OUR SOLUTIONS

Cetim offers you a general or targeted service fitting your needs:

- every type of non-destructive testing on every type of regular or innovative material
- compliance with regulatory constraints (audit, recommendations and control implementation)
- remaining life assessment in order to implement a preventive maintenance plan

YOUR BENEFITS

- Cetim multi-disciplinary skills: non-destructive testing, regulations, computation, metallurgy, welding, tightness...
- an official report from a neutral organization independant from all suppliers
