

MANAGEMENT OF INDUSTRIAL EFFLUENTS

Regulatory Compliance at optimized Cost

Your expectations

You want to:

- comply with the limit waste reject values
- implement this compliance at least cost
- avoid any risk for you staff or the environment
- use this as an environmental argument in your communication strategy towards your customers or local area

Our solutions

Define technical and economical solutions by integrating current or future regulations:

- suggest alternative solutions which best suit your own context: alternative products or processes, reduction of water and chemical products consumption, reduction of pollution flows, choice of effluent treatments
- perform feasibility studies (physical and chemical tests, evaporation, membrane techniques...)
- management support for projects related to setting up an effluent treatment facility
- we support you when confronted to regulatory authorities
- changing support through staff's awareness and training.

These projects can be funded by the French Agences de l'Eau

Your benefits

- Cetim's deep knowledge of current regulations and its contribution to the building up of future regulations guarantee that you will always be in perfect compliance with these rules without excessive efforts
- thanks to the expertise Cetim has developed with industries and its capacity to propose innovative solutions, you benefit from operational and practical solutions fitting your trade
- setting up an in-house environmental approach which unifies and rallies your collaborators around
- funding research support
