

EXPERTISE OF LUBRICANTS USED IN YOUR INDUSTRIAL PROCESS

A parameter which deserves your whole attention!

Your expectations

Are you using lubricants in your manufacturing processes?

Most of mechanical breakdowns are due to a lack of lubricant or a defective lubrication.

You can drastically reduce this waste and loss of added value.

When designing or optimizing your product or process, an analysis is necessary!

Our solutions

- lubricant's state measurement and analysis (degradation and contamination)
- support for choosing products and processes
- facilities expertise and optimization
- recommendations to improve your lubricant life expectancy
- support for your engineering department when selecting current and future solutions

Your benefits

Cetim's advanced technological knowledge enables you to:

- improve knowledge on your equipment's wear mechanism and increase your productivity and profitability
- increase your lubricants' life expectancy and optimize your maintenance activities
- reduce your process' energy consumption and the waste costs
- reduce occupational hazards for your operators and contribute to environmental protection
