

# NOISE AND VIBRATION COMPLIANCE AT WORKPLACE

## Risk Assessment and Staff Protection

## Your expectations

You want to:

- assess and manage noise and vibration risks for your staff according to 2002/44/CE and 2003/10/CE directives on occupational noise and vibrations exposure
- meet the demands of company's occupational health committee
- perform periodic controls for noise and vibrations
- implement solutions to reduce noise and vibrations and improve your staff's working conditions

## Our solutions

- support for implementing a general process to control and reduce noise and vibrations
- industrial sites audit, noise and vibration evaluation, design of a noise map, workshops characterization
- workplace study and analysis, in situ measurement and studies, and recommendations for noise reduction
- forecast study with full workshop modelling
- full support for project management and acceptance

## Your benefits

- As an independent technical center, Cetim ensures an objective approach of your noise and vibration issues based on its expertise in regulatory intelligence and advanced technical skills in every field of engineering.
- you have only one contact who is neutral about your equipment suppliers and gives you access to every skill necessary to realize your project (material, process and organizational expertise)
