

# QUALIFICATION OF YOUR FORGING AND CASTING SUPPLIERS

Secure your purchases

## Your expectations

You want to purchase parts produced using forging or casting processes (development of new parts, change of supplier, etc.) and you need assistance in choosing the right partner

## Our solutions

In partnership with your technical and purchasing departments, our teams can intervene at various stages of the process:

- **Validation of the manufacturing process** in relation to the expected objectives or the technical complexity of the part
- **Technical review of the design** to ensure that the part is compatible with the manufacturing rules of the selected process
- **Drafting of procurement specifications** to formalise customer requirements (quality level, definition of controls, compliance with regulations, etc.) adapted to the chosen production solution
- **Identification of a suppliers panel** (foundries or forges) best suited to meet the specifications
- **Critical analysis** of supplier bids
- On-site **prequalification** of suppliers with your teams (strengths, technical acceptability, actual production capacity, etc.)

## Your benefits

As the Technical Centre for the Mechanical Engineering Industry, Cetim is at the heart of the French foundry and forging industry.

You benefit from a "turnkey" specification, drawn up by experts in the field to meet your needs.

You benefit from an impartial opinion on the technical choices under consideration.
