

STUDY, DESIGN AND MANUFACTURING OF MECHATRONIC PROTOTYPES

Mechatronics, an innovative solution for more intelligent products

Your expectations

When industrializing a new product, equipment or process, you want to integrate more functions and intelligence. Mechatronics is then an interesting approach. You are looking for a qualified partner to help you set up your project

- inform you on solution principles
- have access to the state-of-the-art: what is possible today?
- dispel technical uncertainties and associated risks
- develop the product which will enable you to get ahead of your competitors while benefiting from the best profitability conditions

Our solutions

Our approach is structured around mechatronic design with intervention of Cetim best experts:

- functional analysis of needs
- research for existing or innovative principles and solutions
- definition of device architectures
- design
- manufacturing
- integration tests
- performance and qualification tests
- technical and economical evaluation

Your benefits

- Cetim has set up a resource center dedicated to mechatronics and a network of technological partners
- you benefit of a R&D program set up in 2004
- through a unique project manager you reach a pool of mechanical, electrotechnical, electronic, microelectronic skills and talents in signal treatment and automation, microelectronics, sensors and physical measurement.
