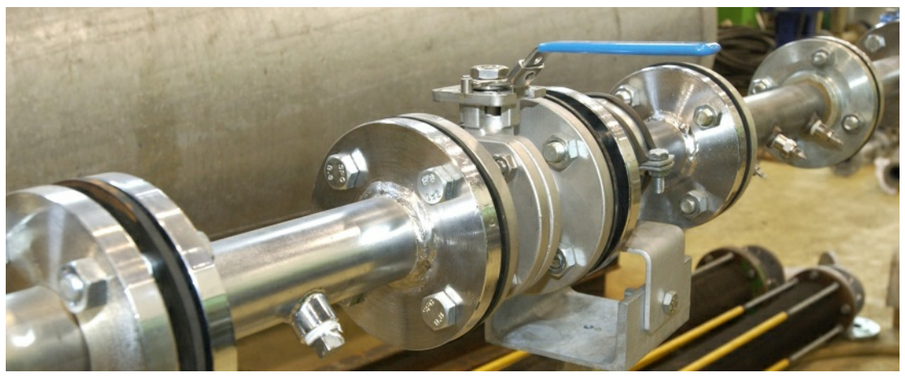
Cetim's services

OPTIMIZATION OF PUMPING EQUIPMENT AND NETWORKS



A unique expertise in the field of fluids

Your expectations

In order to optimize your operation costs for pumping equipment and distributing networks, you have to undertake some improvements:
• state examination and control of installations
• components dimensioning and selection
• monitoring of facilities
• failure analysis
• energy optimization
• predictive maintenance

Our solutions

• design support
• full audits of existing installations
• on-site tests
- identification of potential improvements
- definition of a maintenance plan
• platform tests and qualification

Your benefits

• Cetim's multi-disciplinary skills: mechanical, hydraulic, electric and acoustic skills
• an extended range of tests dedicated to your pumping equipment
