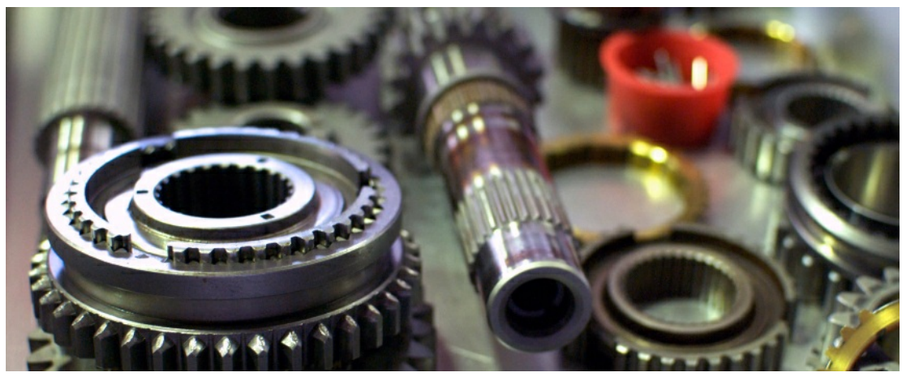
Cetim's services

SELECTION OF GEAR WHEELS MATERIALS AND TREATMENTS



Selection of gear wheels materials and surface treatments

Your expectations

• get an expert support when choosing a gear wheel material and heat treatment within the frame of a technical specification
• make the right sufficient choice to guarantee your customer’s satisfaction

Our solutions

A Cetim expert intervenes to:
• evaluate the loading capacity of the mechanism
• assess the depth of maximal shear stress
• help you to select the material (steel, plastic...) / heat treatment (carburization...)

Your benefits

With a practical and technological experience, Cetim's pluridisciplinary teams (materials and gears) bring you the best answer according to your context
