Cetim's services

SUPPORT FOR MACHINE MATERIAL SELECTION

Choose the best fitted materials or surface treatments for machine components in order to improve your equipment’s order-fill ratio

Your expectations

You want to improve the life expectancy of some mechanical components of your machines or toolings (wear parts or critical mechanical components) in order to:
• reduce production stops due to breaks
• reduce your stock of spare part or wear parts.

Our solutions

We offer you to support an in-house working group composed, according to your needs, with different engineers and managers (in maintenance, manufacturing, production methods or design office) to cover the following steps:
• meetings with the working group
• analysis of the operating and loading conditions of the implied components
• suggestions for improvement (material replacement, selection of surface treatment, mechanical redesign)

Your benefits

• reduction of your corrective and preventive maintenance costs
• productivity increase
• our general approach combines many different skills to help you optimize your production tool
