

PRESSURE EQUIPMENT FAILURE

Secure your pressure equipment

Your expectations

As a pressure equipment operator or user, you want to:

- Have a full or punctual expertise for your equipment following a failure
- improve safety, ensure maintenance or maintain its operational conditions
- Evaluate its remaining life or extend its service life
- Bring it back into technical or regulatory compliance

Our solutions

- Diagnosis and recommendations of control means to implement on every type of equipment or materials (metal, polymers and composites, etc.)
- On-site relevant non-destructive tests
- Analysis and measurement of critical failures towards brittle fracture
- Assessment of the measured defects' nocivity
- Assessment of remaining life and recommendations

Your benefits

Cetim offers you:

- A multidisciplinary approach: non-destructive testing (NDT), regulations, computation, metallurgy, assembly, welding, corrosion and anti-corrosion protection, tightness...
- An official report from a neutral and recognized organization
- Reactivity and mobility of our teams in France or abroad for your emergencies
- A support via Cetim Academy® training courses which can be customised, and which benefit from Qualiopi® certification.
