

TEST AND CHARACTERISATION OF PRESSURE ACCESSORIES AND EQUIPMENT

A team of pressure equipment experts who know your job !

Your expectations

As an equipment manufacturer or operator, you want to :

- validate the design of pressure equipment accessories and components
- experimentally determine the behavior and stresses of your equipment during hydraulic proof tests.

Our solutions

Cetim's pressure equipment expert team designs and performs tests on your equipment and accessories, and puts its equipment at your disposal for the following purposes :

- Conducting pressure, temperature, accelerated ageing, cycling tests.
- Performing your tests in a large-dimension bursting pit (length : 12 metres)
- Performing regulatory hydrostatic pressure resistance tests (DESP 97/23/EC)
- Instrumenting and performing measurement on pressure equipment (deformation, displacement, expansion, acoustic emission, etc...)

Your benefits

You will benefit from the expertise of a pluridisciplinary team (pressure test, regulation, instrumentation) with a comprehensive experience of your field of application.
They provide you with a solution perfectly adapted to your problem, whether for standard or customised tests.
